Thu, 11 Oct 2018 06:52:00 GMT - The  $\hat{\beta}$ -sheet (also  $\hat{\beta}$ -pleated sheet) is a common motif of regular secondary structure in proteins. Beta sheets consist of beta strands (also  $\hat{\beta}$ -strand) connected laterally by at least two or three backbone hydrogen bonds, forming a generally twisted, pleated sheet. A  $\hat{\beta}$ -strand is a stretch of polypeptide chain typically 3 to 10 amino acids long with backbone in an extended conformation.
