Growing a Cactus from Seed - Desert Botanical Garden -

Tue, 10 Jul 2018 01:04:00 GMT - This is where most people make mistakes. Adult cacti are succulents. Baby cacti are not. An excess of water is needed to wake up the sleeping seeds and wash away chemicals in the seed that inhibit sprouting. Once sprouted, cactus seedlings must stay moist for the first one to two years of their lives.

The Cactus Explorer -

- Fertilize young plants during the growing months. Though cacti grow slowly, their growth can be supplemented during the growing months of spring and summer with the light application of fertilizer or plant food. Cacti generally require less fertilizer than other plants " try using a dilute solution of liquid fertilizer once a month.
