Tue, 09 Oct 2018 06:12:00 GMT - A crystal or crystalline solid is a solid material whose constituents (such as atoms, molecules, or ions) are arranged in a highly ordered microscopic structure, forming a crystal lattice that extends in all directions. In addition, macroscopic single crystals are usually identifiable by their geometrical shape, consisting of flat faces with specific, characteristic orientations.

Mon, 08 Oct 2018 06:41:00 GMT - With the above advancements, it is necessary to revisit the prevailing Cu<sub>2</sub>O crystals with tailored architectures. To date, although several previous review papers have reported the partial summaries of the progresses in facet-dependent properties of Cu<sub>2</sub>O crystals , , , a comprehensive summary on Cu<sub>2</sub>O crystals is lacking and highly desirable to further promote the development of ...

Fri, 12 Oct 2018 19:23:00 GMT - Crystal healing is a pseudoscientific alternative medicine technique that employs stones and crystals. Adherents of the technique claim that these have healing powers, although there is no scientific basis for this claim. In one method, the practitioner places crystals on different parts of the body, often corresponding to chakras; or else the practitioner places crystals around the body in an ...

Wed, 10 Oct 2018 11:40:00 GMT - Crystals have always been rather appealing to me. There is something special about what they are, what they represent. They are more concentrated than regular rocks, they have more crystalline geometric patterns in their atomic structure than the cells in the human body do (sure, it may not be as fluid and moving, but thatâ€™s yin and yang for you)

Tue, 09 Oct 2018 11:55:00 GMT - Liquid crystals can be first organized into thermotropic (temperature dependent) and lyotropic (concentration dependent). Within thermotropic liquid crystals there are high molar mass materials (suitable for polymer) and low molar mass materials.
